

Ginen

A + b

18-03-19

(P1)

$$\left. \begin{array}{l} \text{Prolongation} = P \\ \text{Restriction} = P^T \end{array} \right\} \text{for symm matrix.}$$

$$A_c = P^T A P$$

Galerkin Project

Deadline

ICRA : Sep 15

Two-grid

$$A \rightarrow A_c = P^T A P$$

$$A x = b$$

$$P^T A x = P^T b$$

$$x = Py$$

$$P^T A P y = P^T b$$

$$A_c y = P^T b \equiv b_c$$

Steps

①

$$b_c = P^T b$$

②

$$A_c = P^T A P$$

③

Solve

$$A_c y = b_c$$

④

$$x = Py$$

MG has another component: Smoother (P2)

$$M_{AMG}^{-1} = M_{c, \text{smoother}}^{-1} + M_{c, \text{smoother}}^{-1} - M_c^{-1} A M_c^{-1}$$

$M_s =$  { Jacobi  
SSOR  
block Jacobi  
block SSOR  
ILU }

$A_{\text{Jacobi}} = \text{Jacobi}(A)$

$M_c^{-1} =$

$(P A_c^{-1} (P^T)^{-1})^2$

From 2-Grid to MG

~~AnySolu~~ (A, Smoother Data, Coarse  $P_1$ )  $P\{1\} = P_1$   
 $P\{2\} = P_2$

$$y = \text{AnySolu}(A, J, P = [P_1, P_2, \dots, P_l], A_c, b, c)$$

$$z \leftarrow \text{Smoother}(\text{JacobiSolu}(J, b))$$

$$t \leftarrow \text{CoarseGridSolu}(A, P, A_c, b, c)$$

$$\bullet y = A_c^T b_c$$

$$\bullet t \leftarrow P_1^T P_2^T \dots P_l^T y$$

$$t \leftarrow A t$$

$$y = z + \text{JacobiSolu}(J, t)$$
